DETAILED ACTION

1. In the response filed March 11, 2005, Applicants have elected the compound of Example 19 as the preferred species.
2. Claims not drawn to the elected subject matter are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on March 11, 2005.
3. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
4. Claims 1-20 are Markush claims which are generic to the elected invention. These Markush claims lack unity of invention. Accordingly, the Markush type claim will be examined fully with respect to the elected species and further to the extent necessary to determine patentability. See MPEP 803.02.
5. Claims 1-20 are objected on the grounds that the claims are drawn to an improper Markush group. In re Harnish, 206 USPQ 300, states that a unity of invention exists where compounds included within a Markush group(1) share a common utility and (2) share a substantial structural feature disclosed as being essential to that utility.

Art Unit: 1625

In the instant case, the claimed subject matter does not share a substantial structural feature disclosed as being essential to that utility.

The requirement for a proper Markush claim is that it includes only substances that in their physical, chemical and physiological characteristics are functionally equivalent. The members of the instant Markush groups possess widely different, physical and chemical properties. The compounds are not considered functionally equivalent and are so diverse that they demonstrate dissimilar and unrelated properties. The mere fact that there is structural similarity in pharmaceutical agents is not in itself reason to render all the embodiments functionally equivalent.

The improper Markush groups are X¹- X⁵.

6. The examined subject matter is as follows:

A compound of formula (I) and (II) where the symbols X¹- X⁵ are each carbon with at least one X¹- X⁵ is nitrogen. Amending the claims to the examined subject matter would overcome the improper Markush rejection.

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claims 1, 2, and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A. At claims 1 and 8, the radical -C_{aryl,alkyl} cannot represent alkoxy. Clarification is appreciated.

Art Unit: 1625

B. At claims 1 and 2, what is intended for the R group (all occurrences)?

9. Claims 3-7 and 9-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

10. The Information Disclosure Statements filed October 2, 2003 and March 3, 2005 have been considered. The references alone or in combination form do not teach nor suggested a process for preparing structurally similar compounds as the examined subject matter. According, no rejections based upon prior art are made.

11. Reference N is further cited to sow the state of the art in the preparation of pyridine compounds.
